National Geographic Maps - Reference : The Milky Way [Tubed] (National Geographic Reference Map) before purchasing it in order to gauge whether or not it would be worth my time, and all praised The Milky Way [Tubed] (National Geographic Reference Map):

5 of 5 people found the following review helpful. beautiful poster !By Green Rose I have this up in my hallway. Several people have already commented on it. It has lots of small paragraphs of information around its edge that I like to just stop and read about. At the top it has a "side-view" of the Milky Way called the Galactic Latitude. Of course, it has a pointer pointing to "We are here" in the mass scheme of the billions of stars and planets. Really beautiful. 5 of 5 people found the following review helpful. A sight to Admire, but lack some details By regis Gregoire This poster of the Milky way galaxy is a very nice poster, it give my room ambient and it give a sense of inspiration whenever I look at it. The wall of my room had look really lonely now they are not. The only thing I have a problem with is that poster look a little bit out of date, and could included more star systems along the each of the rings of our galaxy. so I give it a 4 star instead of 5 star. other than that its sight to behold, showing our galaxy in its greatest and majestic form. 2 of 2 people found the following review helpful. Five Stars By mtbrien A beautiful poster that shows Earth's place in the galaxy.

This computer-generated image of the Milky Way shows the entire galaxy in one perspective of a 3-D model compiled specially for National Geographic. The model incorporates the positions of hundreds of thousands of stars and nebulae within the galaxy, shows Earth's location, and includes additional photographs, descriptions and locations of fascinating phenomena throughout the Milky Way. The map is packaged in a two inch diameter clear plastic tube. The tube has a decorative label showing a thumbnail of the map with dimensions and other pertinent information. Sheet Size = 31.25" x 20.25"

About the Author Founded in 1915 as the Cartographic Group, the first division of National Geographic, National Geographic Maps has been responsible for illustrating the world around us through the art and science of mapmaking. Today, National Geographic Maps continues this mission by creating the world's best wall maps,

recreation maps, atlases, and globes which inspire people to care about and explore their world.
